
This appendix presents representative **object code** – machine-generated, compiled/built output – corresponding to source files included in *Antara_Source_Code_Excerpt.pdf*. For an interpreted Python + compiled/minified JavaScript stack, there is no single native binary; the accepted equivalents shown here are (a) real CPython 3.14 compiled bytecode (.pyc) for the two backend files leading the source excerpt, and (b) real minified production JavaScript bundles from an actual next build production build, for the two frontend files leading the source excerpt. Every artifact below was generated directly from the current main branch at the time of this filing – nothing here is hand-written or fabricated. SHA-256 hashes are included so each artifact can be independently verified against the repository.

Corresponds to source file	backend/app/main.py
Artifact	main.cpython-314.pyc
Kind	Compiled Python bytecode (CPython 3.14 .pyc)
Size	21,686 bytes
SHA-256	3bc59ea6f74a5ee4969c2fe1e832110add7cf7e36f62df57beae59eda5c5128b
Generated	2026-08-25 17:17:06 UTC

Binary object code – first 2400 of 21686 bytes shown as a hex/ASCII dump.
